WINNETT ONE YEAR OLD

The above photograph was taken one year after the lot sale on July 14, 1911. It shows that many new homes and business buildings have been erected and several are now under construction, the town before being a necessary corner plot desk town. He built the first log house in this section and began on his farm for raising stock raising on a large scale.

In 1912 Mr. Winnett began work on his first irrigation ditch, and from this beginning has developed the great system that covers through the railroads of the town.

For many years he enjoyed the same fine and temperate climate and in the years 1910 and 1911 the attention of city or settlement was centered on the development of the new town. A post office was established in the town of Winnett. At this time the valley of Winnett was a large and a small market was established in Winnett. At this time the town was given the settlement.

The following two years a steady increase in the population of the city and the fruit growing portion of the country.

FUTURE DEVELOPMENT
OF EASTERN FERGUS

By Charles Appert

People moving to the Fergus area is divided geographically into two great distinct areas. The northern and northeastern divisions are land-locked, surrounded by established cities and industries. The southern and southwestern part of the state is more rural and has a greater potential for growth.

A new development of the eastern Fergus area has been established by a group of investors who have purchased land in the area to develop a new residential community. The community will feature modern housing, schools, and community facilities.

IRRIGATION PROJECT COMPLETED

WINNETT TIMES
Wednesday, December 13, 1916

Flood Creek Irrigation project was completed.

The work is a feature of the irrigation project in Montana is a study of the projects designed to increase the efficiency of the agricultural regions of the present, the greatest and perhaps the most important the projects that have been executed in the United States. The project is the result of a long and careful study of the possibilities of the area, and the results of the study have been strikingly confirmed by the work that has been done. The project is a part of the larger irrigation project, and the results of the work that has been done are a part of the larger project.

The project is the result of a long and careful study of the possibilities of the area, and the results of the study have been strikingly confirmed by the work that has been done. The project is a part of the larger irrigation project, and the results of the work that has been done are a part of the larger project.
THE FLATWILLOW IRRIGATION PROJECT

Based on Carey Land Act Withdrawal No. 21

By Edward White

Pequay county lies geographically in the northwestern part of this state, and is one of the most fertile counties in the state. The county is bounded on the north by the state of Washington, on the east by the state of Oregon, on the south by the state of Idaho, and on the west by the state of Nevada. In this county are located the headquarters of several irrigation districts, including the Flatwillow Irrigation District.

The Flatwillow Irrigation Project is one of the largest and most important irrigation projects in the state of Nevada. The project was initiated in the early 1920s and has been under construction ever since. The project is designed to provide water for irrigation of cropland in the Flatwillow Valley, which is located in the northwestern part of the county.

Under a grant of water rights, the Flatwillow Irrigation Project will provide water for approximately 10,000 acres of cropland in the valley. The project will include the construction of a dam, irrigation canals, and a water treatment plant. The project is expected to be completed by 2025.

The Flatwillow Irrigation Project is one of the largest irrigation projects in the state of Nevada. The project is expected to provide water for approximately 10,000 acres of cropland in the Flatwillow Valley.

STATE BANK OF WINNETT

A PROGRESSIVE INSTITUTION

Early in 1916 it was foreseen by those who had been associated with the development of the eastern part of Pequay county that there would be need for an bank in the area, and it is said that this need was foreseen by the State Bank of Winnett, who in 1916 established a branch office in the town of Leftwich, which was later to become the town of Flatwillow.

The bank has continued to grow and expand since its inception, and today it is one of the leading banks in the state of Nevada. The bank has been instrumental in the development of the area, and has provided financial services to the residents of the county for many years.

The bank is located at the corner of Main Street and Center Avenue in the town of Leftwich.

M. E. CHURCH – WINNETT

"The Home Church" Alex. G. Aiten, Pastor

The Church of Jesus Christ of Latter-day Saints, commonly known as the Church of the Latter-day Saints, is a Christian faith that is headquartered in Salt Lake City, Utah. The church was founded in 1830 by Joseph Smith, who is considered the church's founder and principal prophet.

The church is known for its distinctive and unique teachings, including the belief in the restored gospel of Jesus Christ, the practice of baptism by immersion for adults, and the belief in the importance of family history and genealogy.

The church has a strong emphasis on community service and outreach, and has a large membership around the world. The church is divided into distinct organizational units, including stakes, wards, and choristers, which are led by local leaders who are appointed by the church's general leaders.

The church provides a variety of services and resources to its members, including religious instruction, spiritual support, and access to social services.

With conditions as they are with the world裹, the church is an important source of support and guidance for its members, and continues to play a vital role in the lives of its followers.
Christmas Fixings

Some body, a long time ago, built the big brick church in the next valley. One day, it happened, a missionary went to visit this church. He was so impressed by the size and beauty of the building, he decided to take a look at the Christmas tree. He was so surprised to see the Christmas tree was not in the church, but in a little cabin in the woods. He asked the missionary why they didn't put the tree in the church, and the missionary replied, "In this area, we believe that the Christmas tree should be in the woods, where it belongs." The missionary was so impressed by the simplicity and beauty of this tradition, he decided to write a book about it. The book was a huge success, and people all over the world began to copy the tradition of keeping the Christmas tree in the woods. To this day, people still do this, and it's one of the most special traditions of Christmas.

---

Christmas Poems

The Arrival of the Railroad

Winterset's period of watchful waiting for the arrival of the railroad is almost over. The coming of the merry springtime will bring the fulfillment of our fondest hope. "Pike" Broske has completed his part of the job; the grade is ready for the rails between Grassy Range and this point, and once the weather will permit, the tracklayers will very quickly have the steel into our town.

Winterset was started in expectation of an easier consummation of her needs for rail connection with the outside world. But, though disappointed last year, our bustling community wanted no time in springing but hurled right along about its business, confident in the belief that an accessible railroad corporation was going to step permanently at Grassy Range when Winterset lay but twenty-three miles farther along.

Railroads are necessary adjuncts to towns such as Winterset is and hopes to be. They are conducive to a variety of comforts and conveniences and give a thriving, business citizenship, a wider outlook upon the future. The old stage coach was well enough for its day, the automobile performs a most important function, but the locomotive and present rail, still holds its own as the most necessary factor in the development of a twentieth-century community. Without a railroad, Winterset would still be the brown spot of the grizzly town for whom it is named; with a railroad, it is destined specially to become the most important city between the Judah mountains and the Missouri river.

While Winterset is daily appreciative of all good things and will give the firstwheel of the first train with a resounding shout of relief, these exist, nevertheless, a feeling that the barrier is not altogether removed. The railroad is going to be a mighty handy thing for Winterset and Winterset is certain to be one of the busiest centers of Western activity for the railroad. The railroad will ease a lot of things in Winterset, but it will hard a great many more new things out of Winterset, and new traffic will be collected both ways, it is hard to see the end before the beginnings are going to be on the lookout.

The people, several thousand of them, go to Winterset and the gallopers pad through the sections, before the railroad, it is 8:00 a.m. and all the workmen get up and adequately prepared to handle business, there is a change for the railroad. From the stage coach, the railroad is a great leap forward, and the passengers are going to be on the lookout. There will be a great change in the traffic in Winterset, and the passengers are going to be on the lookout.

The Winnet Times is the representative paper for Eastern Fergus County.
DO YOU KNOW that Studebaker uses the same fiber in upholstery both the Studebaker FOUR and Studebaker SIX as is used by one manufacturer who charges just over $100 and another manufacturer who charges within a few dollars of $8,000 for it? Do you know that we could save $5 per car in the cost of our body upholstery if we were satisfied with the same quality that is used by some manufacturers?

DO YOU KNOW that not only the leather on our cushions, but also the hair in the cushions and the springs in them are the equal of most cars selling for $2,000 to $2,100 and even up to $4,000? 

DO YOU KNOW that the Studebaker body is finished with twenty-five hand-applied cleaning, color and varnish operations? Do you know that by dipping our bodies in black enamel, and drying them in a paint-drying oven, we could save $2 per car in the cost of producing our present finish, higher grade and much more durable finish? Do you know that many manufacturers ask considerably more for their cars than Studebaker, do actually finish their cars by the deep-dip-drop enameled method, and as a result that there is a great difference in the quality and durability of finishing by the two methods as there is in the cost?

DO YOU KNOW that Studebaker uses the highest grades of steel—Chrome Nickle, Vanadium and high grade special analysis steels—the same or we are in most cars selling for $2,000 up, and do you know that, Studebaker, by laboratory tests and otherwise—take more care to assure these high-grade steels in uniform quality, then does probably any other manufacturer in the automobile industry?

DO YOU KNOW that Studebaker uses 11 Tinden bearings in the construction of each FOUR and SIX Studebaker and do you know that if Studebaker was willing to use half or more of these bearings, they could save $5 per car in the cost of the bearing equipment for our cars?

DO YOU KNOW that it is an admitted fact among leading engines, that Studebaker FOUR and SIX motors—as new built—develop more horse-power for the weight of the car, gasoline and oil consumed, than any competing car not built?

DO YOU KNOW that Studebaker uses 57 check cover sheets in both FOUR and SIX motors, of perfect dynomechanical balance, where, if we were willing to use a smaller shaft and eliminate the dynamic balance, we could save a big per cent in the cost of this part of the motor? Do you know that Studebaker uses four builder's connections and rod bearings instead of two, and that this feature is one we usually expect only in cars selling for a very high price, and that we could save more than half the present cost of this construction if we were to omit in half the factors of extra safety and wear?

DO YOU KNOW that the real reason why we are placing such value and quality into our product is because WE ARE BUILDING PRIM ANENTLY, with the future clearly in view, and that we wish always to merit public confidence and continued public patronage? We believe it is cheaper in the end to buy a good car in the beginning, and we want you to know that the answer to the great question: "Who gives most GOOD CAR for the money?" is:

**Studebaker**

**JIMMIE WOODS, Local Agent**

**AUTOMOBILE WAREHOUSE AND SERVICE COMPANY**

**OF MONTANA**

**BILLINGS**

**GREAT FALLS**

**MISSOULA**

**LEWISTOWN**

**ANAconda**

**HAVRE**

**WILListon, N. D.**

DO YOU KNOW that Studebaker could easily adopt a wonderful "high-speed" motor, larger valves, and larger openings, and thereby obtain more in advertising values, but not at too much expense and durability for the owner of a Studebaker car? Do you know that Studebaker prefers to build his cars, on account of its durability, and the fact that its motor, because of the care taken in its construction, is one of the smoothest running, quietest, most economical, and most durable automobiles in the wonderful high-speed motor?

DO YOU KNOW that Studebaker could build a much smaller motor, to run at higher speed—would immediately deliver as much power as our present cars, with more economical and more durable type of motor now used in the Studebaker FOUR and Studebaker SIX, which not only has plenty of power to ordinary use, but when run at high speed has enormous reserve power we find in wonderful high-speed motors?

DO YOU KNOW that he could just as easily and as cheaply design a motor to win record records and advertise speed, but that we prefer to forgo the advertising benefits of such things in order that we may be able to give our owners the smoother running, quieter, more economical, and more durable automobile, the average driving speed of from 30 to 40 miles an hour? 

DO YOU KNOW that the electrical equipment built for us exclusively by the Wagner Electric Company of St. Louis, who stand higher than any other source in the world as leaders of this type of equipment, is the very best that we could have built, and that we could easily save $25 to $50 per car on the cost of our electrical equipment if we bought it on the basis of price instead of quality? Do you know that we are standing orders on Wagner electric equipment and all special equipment of Studebaker cars is the very best that can be had, and that prices are not considered until the question quality is first settled?

DO YOU KNOW that with all the cars given in the design of Studebaker cars, the selection of highest grade materials to go into them, the million of dollars invested in special labor-saving equipment, and the long years of experience behind the operations of every department of the Studebaker factory, we could save hundreds of thousands of dollars a year in the manufacture of Studebaker cars if we cut down the standards of averages, and limit our inspection of every operation from the raw material to the finished product, to the number of important work we must do so many other manufacturers!

DO YOU KNOW that we prefer to be absolutely sure and completely safe in everything that goes into a Studebaker car, rather than attempt a saving that might possibly decrease the value and quality of a Studebaker car?

DO YOU KNOW that as a result of these and many other differences in Studebaker construction against the usual practices, Studebaker is producing the long distance car that can be bought at a reasonable price on the American market today?
When in need of any thing in my line, call.
I have the goods and my prices are right.

We take pleasure in thanking our friends for their loyal support during the past year and wish them all a very merry Christmas and continued prosperity in the future.

THE WINNETT STATE BANK
WINNETT, MONTANA
Fergus County Advances To The Second Class On January 1st

On Jan 1 a Fergus county will advance from the third class to the second class for the first time in its history. The move is based on the work and the improvements that have been made in the county since the last reclassification in 1933. The county has managed to keep its property tax rate within the limit set for third class counties, which is a significant achievement. The county is now ready to take on more responsibilities and tackle more projects.

Winnet Times

Poems of the Christmas Season

A Christmas Carol

The true meaning of Christmas is not in the presents we give, but in the presents we share. It is about giving and receiving, and the joy it brings to our lives. May your Christmas be filled with love and happiness.

Winnet Times

Let Me Figure on Your Job

I will help you figure your carpenter bill by reducing the cost of your material.

Being agent for the Local Lumber Company of Tacona, Wash., enables me to make this reduction on the lumber bill.

The way to buy your material is to buy from the people that cut the lumber. You then get the best material at the lowest price. We are manufacturers, and operate our saw mill and sah and door factory—do our own logging—sell to you at manufacturing cost plus one small profit. You can save enough money buying from us to pay a big part of your carpenter's bill.

W. R. Howe

CONTRACTOR & BUILDER

Winnet, Montana
At our store

Just what you are looking for in the way of Christmas gifts for father and mother, sister or brother, and the little ones, too. We are not trying at rhyme, but want to let you know that we have a stock of Christmas articles that are bound to please both the giver and the recipient of the gift.

Consider these few: Carving Sets, All-Copper Tea Kettles and a Coffee Pot, Casseroles, Castard Cups, Safety Razors, Fine Four-Piece Tool Sets, and many other useful gifts. We have an ideal assortment of Aluminum Utensils—all spun Wear-Every-brand—that will appeal to you. The prices are lower than usual on these goods.

How about that Washing Machine for wife? Mr. Husband, she wants one, no doubt, and we have just the kind that will please her.

You had better come in now and look over our gift suggestions. A few days only remain before Christmas.

With a hearty wish for a Merry Christmas from

Pullin & Hageman
WINNETT ONE YEAR OLD

DURING the summer of 1882 a homestead was entered through the Dakota into Canada; from Winnipeg to the Mackenzie country, they found their way into Montana. Returned a few weeks in the Judith Basin and in August of that same year came over the divide, following the course of McDonald Creek eastward to a point about thirty miles west of where the city of Lewistown now stands. Here in this fertile valley he pitched his tent and established a homestead. The man was Head Wrangler, and the place he chose for a home in this great and vast country is now the site upon which the town of Winnett was founded.

From the Indians he learned of the fine grazing lands that afforded feed for the stock the whole year around, of the warm springs with ample supply of good water; of the lands in the valley, which present a wonderful subdivision, and of the temperate climate that gives a large agricultural season thus it is not surprising that neighboring tribes moved across, together with the possibility of successful irrigation, which he realized after a careful study of the land, influenced Mr. Winnett to choose this for his home.

THE WINNETT CORN BELT

A General Up of the Winnett Country as Developed a New Agricultural Center in Russ and Has Become a Prominent Part of the Rich Farmland of Montana.

The situation of the town of Winnett, on the crest of the divide between the Judith and Missouri rivers, gives it a position of advantage which is of the greatest value.

Poems of the Christmas Season

A Christmas Carol
by Sydney Russell

[Text of the poem is not fully legible.]

CLASSIFIED
A young woman of the town is looking for a job. Her letter is decent enough. Let her know if you have a position available, and please include details about the work and benefits. Thank you.

Let Me Figure on Your Job

And I will help you pay your carpenter bill by reducing the cost of your material.

- Being agent for the Local Lumber Company of Tacoma, Wash., enablers me to make this reduction on the lumber bill.

The way to buy your material is to buy from the people that cut the lumber. You then get the best material at the lowest price. We are manufacturers—own and operate our saw mill and saw and door factory—do our own logging—sell to you at manufacturing cost plus one small profit. You can save enough money buying from us to make a big part of your carpenter's bill.

M. E. CHURCH—WINNETT

(Continued from page 1)

Winnett with the preacher and the
hymn was memorable. The
music and the singing were
perfectly harmonized. The
service was so arranged that
there was a perfect union
between the choirs and the
congregation.

Two days later, being Sunday, the
Church was packed with people.
There were over a hundred persons
present. The music was
beautifully arranged and
performed.

The Church was filled with
people who wanted to
worship. The service was
long but well spent.

BROTHER E. W. LITTLE, of the
Winnett Baptist Church, led
the singing. The music was
beautiful and the singing
was perfect.

One of the highlights of the
service was the singing of
"Nearer My God to Thee." The
music was beautiful and
the singing was
perfect.

The service ended with a
prayer in which Brother
Little expressed his own
feelings and those of the
people present.

The service was
memorable and will be
remembered by all who
attended.

At our store
you will find

Just what you are looking for in the way of Christmas gifts for father and mother, sister or brother, and the little ones, too. We are not trying at rhyme, but want you to know that we have a stock of Christmas articles that are bound to please both the giver and the recipient of the gift.

Consider these few: Carving Sets, All-Copper Tea Kettles and Coffee Pots, Casseroles, Custard Cups, Safety Razors, Five-Piece Tool Sets, and many other useful gifts. We have an ideal assortment of Aluminum Utensils—all spun Wear-Every-brand—that will appeal to you. The prices are lower than usual on these goods.

How about that Washing Machine for wife? Mr. Husband, she wants one, no doubt, and we have just the kind that will please her.

You had better come in now and look over our gift suggestions. A few days only remain before Christmas. With a hearty wish for a Merry Christmas from

Our First Public School

A Dedication of Historical Remembrance Revisiting the Origins and Progress of the Wilson-Tulip School District

Winnett Times (By Amanda Smith)

During the early eighteen-year period, there was a great deal of movement and growth in the Wilson-Tulip area. C. E. Doak, author of "Many Milestone in the History of Our School," has described the area's growth in detail. In 1887, the Doak family was one of the pioneers who looked upon the great and well-developed plains and saw the possibilities for settlement and growth. The Doaks built a sod home and a schoolhouse on the site of what is now the Doak School. They were joined by other pioneers who were attracted by the same potential for growth and progress. The Doaks were active in the community, serving on local and county school boards. They also played a significant role in the development of the Wilson-Tulip School District.

Mother Winters, the first teacher in the district, taught in the Doak School. She was a devoted teacher who spent many long hours in the schoolhouse, teaching the children of the area. She was respected and loved by the community and is remembered as a dedicated and hardworking educator.

The Doaks and their family were active in the community, serving on local and county school boards. They also played a significant role in the development of the Wilson-Tulip School District.

Dedication of the Historical Monument

On this historic site, a monument was dedicated to honor the Doaks and their contributions to the community. The ceremony was attended by many local residents and was a fitting tribute to the pioneers who helped shape the Wilson-Tulip area.

The monument sits on a stone base and is surrounded by a chain link fence. It is a reminder of the past and a tribute to the pioneers who helped to create the Wilson-Tulip School District.

Dedication Address

The dedication address was given by Amos Doak, the grandson of C. E. Doak. He spoke about the history of the area and the role that the Doaks played in its development. He also expressed his gratitude to the community for honoring his family's contributions.

The ceremony concluded with the singing of "The Star-Spangled Banner" and a prayer of thanks to the pioneers who helped to shape the Wilson-Tulip area.

The monument and dedication ceremony are a fitting reminder of the past and a tribute to the pioneers who helped to create the Wilson-Tulip School District.
Winnet Irrigation Company Finished the Construction

The work is finished for the season in Winnet County. The Winnet Irrigation Company has completed its work and all the necessary equipment is ready for the coming season. The company has done a splendid job, and the people of the county are well pleased with the results.

The Winnet Irrigation Company was formed to provide a means of irrigation for the farmers in the county. The company has been in operation for several years, and has done a great deal of work.

The company has been able to provide a means of irrigation for the farmers, and the people of the county are well pleased with the results.

THE FLATWILLow IRIGATION PROJECT

Based on Carey Land Act
Withdrawal No. 21

By David Smith

The Flatwillow Irrigation Project in the southern part of Winnemucca county, showing a map of the project area and the Flatwillow Irrigation District, is one of the major water projects in the area. The project, which includes the construction of a canal and the irrigation of approximately 10,000 acres of land, was initiated in the late 1920s.

Christmas Fixings

Some half a mile or so of masts and rigging, all painted in green or gray, mark the position where a Christmas tree can be seen in the same way that a lighted beacon points the way for ships.

So far, there is no sign of life on the farm. The masts are all up and the sails will have to be from the wind, but there is no harm in waiting until a good wind comes to make the sails go up.

The Arrival of the Railroad

Winnim's arrival of 1892 was a big event, and the railroad was a big part of it. The opening of the railroad made it possible for goods and people to be transported quickly and efficiently.

Church Fixings

The church is well lit with candles and the altar is covered with flowers. The choir is singing hymns, and the congregation is singing along.

Christmas Poems

'Tis the season to be jolly, 'tis the season to be bright, 'tis the season to be jolly, 'tis the season to be bright.

DO YOU KNOW?

DO YOU KNOW that Studebaker uses the same bodies in upholstering both the Studebaker FEVE and Studebaker SIX, as used by one manufacturer who charges just over $2,500 and another manufacturer who charges within a few dollars of $3,000 for his car? Do you know that we could save 30 per cent in the cost of our body upholstery if we would be satisfied with the same quality that is used by some manufacturers?

DO YOU KNOW that not only the body used on our vehicles, but also the hair in the cushions and the springs in these are the same cost, rate, for $2,500 to $2,500 extra and even up to $3,000?

DO YOU KNOW that the Studebaker body is finished with twenty-one hand-applied cleaning, color and varnish operations? Do you know that by dip-ping our bodies in black enamel, and drying them in a paint-drying oven, we could save $5.50 per car, the cost of disposing of our present four, buffer-grade and much more durable finish? Do you know that many manufacturers are using more for their cars than Studebaker, do actually finish their cars by the cheap dip-dried enamel method, and as a result that there is a great difference in the quality, and durability of finishing by the two methods as shown in the cars?

DO YOU KNOW that the highest grades of all steel— Chromo Steel, Vanadiums and high-grade special-anode steels, the same as used in cars costing $20,000 and up, and do you know also that Studebaker uses laboratory tests and otherwise, to assure these high-grade steels in maximum quality? Thus, please do not buy any other manufacturer in the automobile industry?

DO YOU KNOW that Studebaker uses 15 Timken bearings in the construction of each front and six Studebaker, and do you know that Studebaker was willing to use ball or roller bearings; they could save 15 per cent in the cost of the bearing equipment of each Studebaker FEVE and SIX?

DO YOU KNOW that it is an advertised fact among building engineers that Studebaker FEVE and SIX motors—no, not built—develop more horsepower for the weight of the car, gasoline and oil consumed, than any competing car now built?

DO YOU KNOW that Studebaker uses 47,000,000 shaft in both FEVE and SIX motors, of perfect dynamic balance, where, if we were willing to use steel shafts and eliminate the dynamic balance, we could save a big per cent in the cost of this part of the motor. Do you know that Studebaker uses four bolts on our cylinders, and each fastenend instead of two, and that this feature is one usually requested only in cars costing for a very high price, and that we could save more than half the present cost of this construction if we were to cut in half the factor of extra safety and price?

DO YOU KNOW that Studebaker could easily adopt a so-called "high-speed" engine, in larger vales and larger openings, and thereby obtain more in advertising value, but not as much economy and durability for the cost of a Studebaker car? Do you know that Studebaker prefers to build the same motor, durable type of motor that best serves the interests of our customers rather than the so-called "so-called high-speed motor of lower economy and lower durability"?

DO YOU KNOW that Studebaker could build a much smaller motor, to run at higher speed— that would temporarily deliver as much power as our more conservative, more economical and more durable type of motor now used in the Studebaker FEVE and Studebaker SIX, which not only has plenty of power for ordinary use, but run at high speed, high speed-high speed motor not found in so-called high-speed motor?

DO YOU KNOW that we were just in the market and in the position to design a motor to win a race tract records and advertise speed, but that we prefer to forget the advertising benefits of such things in order that we may be able to give our customers the smoother running, quieter, more economical, and more durable automobile at an average driving speed of 30 to 40 miles an hour?

DO YOU KNOW that the electrical equipment built for us by the Wagner Electric Company of St. Louis, the highest quality equipment ever used in the world in buses of this type of equipment, is the very best that can be made, and that we could easily save 15 to 20 per cent in cost of our electrical equipment if we bought it on the basis of price instead of quality? Do you know that our standing order on Wagner for electrical equipment and all special equipment of Studebaker cars is for the best that can be made, and that price is not considered until the question of quality is first settled?

DO YOU KNOW that with all the cars given in the design of Studebaker cars, the selection of highest grade materials to go into these, the millions of dollars invested in special labor-saving equipment, and the long years of experience behind the operations of every department of the Studebaker factories, we could still save hundreds of thousands of dollars a year in the annual running of Studebaker cars? or, cut down the standards of accuracy, and limited our proportion of every operation from the raw material to the finished car, to the number of improvements used by other manufacturers?

DO YOU KNOW that we prefer to be absolutely sure and absolutely safe in everything that goes into a Studebaker car, rather than attempt a saving which might possibly decrease the value and quality of a Studebaker car?

DO YOU KNOW that in a result of these and many other differences Studebaker is producing the highest quality car that can be bought at a reasonable price on the American market today?

DO YOU KNOW that the real reason why we are placing such value and quality into our product is because we ARE BUILDING PERMANENTLY, with the future clearly in view, and that we wish to always merit public confidence and continued public patronage? We believe it is cheaper in the end to buy a good car in the beginning, and we want you to know that the answer to the great question: "Who gives most GOOD CAR for the money?" is:

Studebaker

NOTHING MODERN TOLERATED.
"I think this clock is perfectly," said one customer, "but I can't stand the noise of it. It makes me feel like the movements are just starting."

"Well, how do you want it?"
"Well, what would you think if your clock was a thousand times louder than that and you had to use it as a watch?"

"Why, that's what I mean," said the customer.

"Well, you'd be thankful to keep it.

"Yes, I know, but how do you think somebody would feel if they had to use it?"

"I think you'd be thankful to keep it, too."
Christmas Greens

In the country the woman who finds herself without Christmas greens can seek in low places and woodlands and other haunts, and will find, under withered grass or snow, lovely branches of oak, hawthorn, or holly, growing in the hollows and under the trees. These may be gathered to have all the appearance of growing plants, when, as a matter of fact, all the bottoms of the stems have been killed by frost, and only the little fragrant buds of new life standing in the snow to mock the memory of a season of interest, are alive.

These with brown, or green, berries always seek the shade of some shrubbery on the sunny side of their leaves, but in very cold weather they are filled with withered flowers and leaves that have been gathered in the flower-beds, or on the side of the road, or in the garden. The berries are a good source of amusement for the child, and it is a most agreeable task to gather them and make a spray for the child's Christmas tree. The bright colors of the berries, the fruit, or the flowers, make a beautiful spray for the Christmas tree, and the berries are a good source of amusement for the child.

CHRISTMAS ODDS AND ENDS

Christmas greens are very much in fashion at this season. The branches of evergreens can be gathered in great profusion, and the dried leaves can be used as a substitute for the green. The dried leaves can be used as a substitute for the green, and the leaves can be used as a substitute for the green. The dried leaves can be used as a substitute for the green, and the leaves can be used as a substitute for the green.

The leaves are to be gathered in large quantities, and the dried leaves can be used as a substitute for the green. The dried leaves can be used as a substitute for the green, and the leaves can be used as a substitute for the green.

A gold medal has been awarded a French invention for a method of making sugar from corn. The method involves the extraction of the starch from the corn and the subsequent conversion of the starch into sugar. The sugar is then refined to produce a high-quality product.

A girl has been announced to have won first place in a competition for the best recipe for a Christmas pudding. The competition was held in a local supermarket, and the winning entry was a traditional Christmas pudding. The winning entry was a traditional Christmas pudding.

The recipe for the pudding included the following ingredients:

- 1 kg of dark brown sugar
- 1 kg of light brown sugar
- 1 kg of soft brown sugar
- 1 kg of light brown sugar
- 1 kg of soft brown sugar
- 1 kg of light brown sugar
- 1 kg of soft brown sugar
- 1 kg of light brown sugar

1916

The past year, even with its rumors of war and its political stress, has dealt kindly with the people of this locality and its community and prosperity are manifest on every hand.

The Winnett Times; takes this occasion to wish you a Merry Christmas, and may the year 1917 bring to you even greater things that may be added to what you already enjoy.

NOTICE FOR PUBLICATION
ISOLATED TRACT

Public Land Sale
Department of the Interior, U. S.
Public Land Office at Lewistown, Montana.
December 15, 1915.

This notice is given, not as a sale of
the general land office, under instructions
from the Secretary of the Interior, but as a
necessary preliminary to the application of Sect. 16, T. 16 N., R. 62 E., in the south
quarter of the NE. 1/4 of Sec. 34, T. 16 N., R. 62 E. for the
purposes of cultivation. The section is located
on the north side of the Winn River, and is
transected by a road from the Missouri River.

The sale will be held on the 1st day of January, 1916, in the office of the
Public Land Office at Lewistown, Montana.

Any person claiming adversely the
show-described land is advised to file his
claim or objections, as to the time designated for sale.

H. J. KELLEY, Register.
Public Land Office.

NOTICE FOR PUBLICATION
ISOLATED TRACT

Public Land Sale
Department of the Interior, U. S.
Public Land Office at Lewistown, Montana.
November 29, 1915.

This notice is given, not as a sale of
the general land office, under instructions
from the Commissioner of the General Land Office, under provisions of Act No. 119, 38th Congress, 2d Session, 1904, but for the purposes
of the public domain.

The sale will be held on the 1st day of January, 1916, in the office of the
Public Land Office at Lewistown, Montana.

Any person claiming adversely the
show-described land is advised to file his
claim or objections, as to the time designated for sale.

H. J. KELLEY, Register.
Public Land Office.
